Stylizing Your Bar Chart

- Keep bars sorted by height.
- Make a horizontal bar chart.
- Add a legend to your chart.
- Show all axis labels.
- Multiple indicators can be graphed using a bar chart either by having the bars grouped or stacked.
- Remove information from probe labels by NOT including graph attributes in the tooltip.
Use this color scale to change the colors of a stacked or grouped bar chart. For bar charts with a single indicator, you will need to use the Color Controller (under tools).

Adjust the spacing between the bars on the graph.

Set these values to keep the scale of the graph constant regardless of the attribute or subset you are viewing.
Add a custom title to your graph.

Add a dynamic title to your graph.

Adjust the margins around the graph.

Add a custom x-axis title

Adjust the placement and angle of the x-axis labels.
